## Introduction

- Historically, North Korea's interest in electric vehicle development has risen enough to lead to the development of a small electric vehicle's design in September 2018
- Combining South Korea's technological prowess and North Korea's resources, it may be possible to form a consensus on how the Korean peninsula's electric vehicle industry will develop
- We predict the development of a consensus on the prospects of inter-Korean peace and energy cooperation, along with the promotion of a "Green Détente," in line with the inauguration of the new government

## Main Topic

Prospects for inter-Korean peace, energy exchange, and cooperation in the electric vehicle industry.

## Introduction

ASEAN market is a single market with a total population of 660 million and GDP of \$3.2 trillion, emerging as a new growth engine for the global economy as a consumer market and production base with enormous potential that the world pays attention to. For the Korean economy, ASEAN also develops into a core economic cooperation partner who is the second-largest trading partner (1st China) and the third-largest investment target (1st US, 2nd EU). Korea shares goals such as electric vehicles and carbon neutrality with ASEAN countries, therefore close policy cooperation is important in the future.
